## Bookeye® 5 V3A Automatic

Gentle document digitization paired with maximum productivity thanks to the motorized V-shaped glass plate

With its 600 dpi and a scan time of less than 3 seconds for the entire A3+ capture area, the latest model in Image Access' 5th generation of book scanners is equally suitable for large and small digitization projects.

### A special highlight: the new, motor-driven V-shaped glass plate for maximum productivity

Automatically traversing at speeds from 19mm/sec up to 113mm/sec and a total stroke of 25cm, it gently presses flattens originals using the V-shaped cradle. The contact pressure can be individually adjusted, guaranteeing the gentlest handling of originals and distortion-free scans. Like all other Image Access Bookeye book scanners, the book cradle can also be used in flat mode.

The V-shaped glass plate is controlled via the ScanWizard's extended user interface. The new control panel with animated function buttons allows, among other things, horizontal movement up and down, setting the speed or the position in which the glass plate remains after the finished scan job. It does not necessarily have to be at the top or bottom. Depending on requirements, the glass plate can be removed and refitted without tools and in two simple steps.

The Scan2Net® platform is the technological foundation of all WideTEK® and Bookeye® scanners from Image Access. It replaces the proprietary scanner drivers and software that traditional scanners require with the fastest common, nonproprietary inter-device connection available: TCP/IP over Ethernet. With network interface speeds much higher than USB 3.0 or camera link, Scan2Net® devices are able to reach unrivaled performance at extremely low connectivity cost.

Scan2Net® scanners feature a 64 bit Linux based real time operating system, dedicated to scanner specific imaging and mechanical control tasks, maximizing scanning speeds and performance.

## Scan2Net® Advantages

- 64 bit Linux based computer, fast and virus protected
- Routable, easy integration into existing network structures
- Only a single IP address is required to run the scanner
- Integration and remote access via the Intranet or even the Internet
- Scans directly to SMB, FTP, hot folders, USB, Email or the Cloud
